BRAND-ONE-PAGER

UnyKorn Sovereign

A private AI executive assistant, built and operated for one principal.

UnyKorn LLC · Wyoming · EIN 42-3536633 · D-U-N-S 145059107 · kevan@ldrcllc.com

What it is

A named AI assistant that lives on your phone. It listens only when you say a codename you choose. It reads your inbox and calendar under permissions you grant, drafts responses in your voice, prepares you for every meeting, chases the people you're waiting on, and confirms every wire or high-risk action with a hardware key you carry. It is not a consumer app. It runs on infrastructure UnyKorn operates directly.

Not a chatbot. Not a copilot. An executive assistant that happens to be delivered as software.

What makes it different

Everyone else	UnyKorn Sovereign
Shared consumer product (Superhuman, ChatGPT, Copilot)	Named agent bound to you alone
Your data trains their model	Zero Data Retention on every LLM call
No wake-word, always on	Custom wake-word, on-device — nothing streams until you say it
Free-form outputs	Every wire, every send, every high-risk action gated by YubiKey
Vendor sprawl (5+ subscriptions to manage)	One monthly invoice from UnyKorn
Cloud-only	Optional on-prem NVIDIA workstation in your office — air-gap capable
Generic voice	Custom voice cloning (your voice, or an advisor's)

What it does in Week 1

- Triages your inbox before you wake up and gives you a 60-second audio brief.
- Prepares you for every meeting the night before — last 5 emails from the person, last shared document, the deal context.
- Drafts follow-ups after every phone call using the call transcript.
- Chases counterparties until they respond.
- Confirms any wire above your set threshold with biometric + YubiKey step-up.
- Answers questions about your archive in seconds — "what did we agree to on the M Helen deal last quarter?"

What it does in Month 3

- Fine-tuned to your writing style using your own past correspondence.
- Runs your archive as a private RAG index with millisecond retrieval.
- Coordinates across your chief of staff, EA, and (optionally) spouse — each with scoped permissions.

- Integrates with Salesforce, Bloomberg, CoStar, Yardi, DocuSign, Notion, Slack — whatever you actually use.
- Learns which meetings are worth your time and which are not.

Tiers

Tier	Setup	Monthly	Ideal for
Sovereign One	$18,000	$4,500	Cloud-only. Single principal. Fastest deployment.
Sovereign Office	$28,000	$6,500 + $1,500 HaaS	Adds on-prem NVIDIA workstation in your office. Air-gap capable.
Sovereign Enterprise	$45,000	$9,500	Up to 5 seats (principal + inner circle) + custom integrations + SLA.

Full pricing sheet: `PRICING.md`.

What you need to bring

- Microsoft 365 Business Premium or Google Workspace Business Plus (or we'll help you add it).
- One-time consent from your global admin (30 seconds via signed URL).
- Your Global Admin's time for one consent, one auth registration.
- If choosing a cloned voice: ~30 minutes of clean audio of you reading a script.

That's it. Everything else — LLM compute, voice synthesis, wake-word licensing, mobile app publishing, cloud infrastructure, monitoring, security review — is delivered under a single consolidated invoice from UnyKorn LLC.

Who this is for

- CEOs of private companies, family offices, and investment vehicles.

- Founders whose calendars and inboxes have become the operational bottleneck.
- Board members and general partners handling confidential deals who can't put that work through a consumer AI product.
- Principals whose current EA + chief-of-staff spend is $250K+ per year and whose next hire is the wrong shape.

Not for: publicly traded companies that need pre-approval from IT security committees to change a browser extension. That workflow doesn't fit this product.

First conversation

30-minute call. No slides. Kevan asks 8 questions to see whether this is worth building for you. If yes, you receive an intake packet the same day and go live in 2–4 weeks.

Schedule: email kevan@ldrcllc.com with subject line "Sovereign — ". Include your calendar link or two windows that work.
